Portfolio

ACADEMIC EDUCATION

Estácio, São Paulo / Brazil

Computer Science | 2023 - 2026

SKILLS

- **Programming languages:** *Java, PHP, JavaScript, TypeScript*
- **Front-End Development:** *HTML, CSS, SASS, Bootstrap, Tailwind, Vue, React, Styled*
- **Back-End Development:** *Node.js*
- **Web Servers:** *Nginx, IIS, Apache HTTP Server, Apache Tomcat*
- **Dependency Management:** *Composer, npm, Yarn, Maven*
- **Frameworks:** *Spring, Laravel, Slim, Electron, Next.js, Vite.js*
- **Database:** *MariaDB, MySQL, MongoDB, PostgreSQL*
- **Remote Access Tools:** *TeamViewer, AnyDesk*
- **Cloud:** *Google Cloud, AWS, Microsoft Azure, Oracle Cloud*
- **Hosting:** *Contabo, Cloudflare*
- **IDEs:** *VSCode, IntelliJ, WebStorm*
- **Softwares:** *Figma, Photoshop, CorelDRAW, Vegas Pro, Camtasia*
- **Operational systems:** *Windows, Linux, Kali Linux, Ubuntu*
- **Version control:** *Git (GitHub, GitLab)*
- **Others:** *Navicat, VirtualBox (Debian, Fedora, CentOS)*

Description

My name is Kauan Vidigal, I am a complete and self-taught Full-Stack developer, currently studying Computer Science. Since 2014, I have focused on programming with an emphasis on Java and Object Oriented Programming. As a freelancer, I offer IT consultancy and software development and custom websites, using PHP with Laravel for the back-end and React or Vue.js with Vite for the front-end. I have experience in configuring web servers (Apache, Nginx) on VPS, advanced security (SSL/TLS, firewall), and performance optimization. I am proficient in MySQL and MariaDB databases, DNS management, and developing robust and scalable APIs. I adopt DevOps practices to ensure efficiency and security in projects. I am open to collaborations and challenges that boost my professional growth and contribute to the success of projects.

Professional experience

Full-Stack Developer

PERIOD OF OPERATION: 2022 - 2024 / FREELANCER

Full-Stack Development of Websites and Web Applications:

- Use of PHP with frameworks such as Laravel for robust and scalable back-end development.
- Implementation of dynamic and responsive interfaces using React, Vue.js, and Vite on the front-end for a modern and interactive user experience.
- Integration of APIs and external services to expand the functionalities of web applications.

Installation and Configuration of Web Servers on VPS:

- Choose between Apache HTTP Server or Nginx for hosting websites and web applications.
- Configuration of virtual hosts to support multiple domains and subdomains on a single web server.
- Advanced management of VPS servers including firewall configuration, SSH and resource monitoring.

Database:

- Use of relational databases such as MariaDB and MySQL for efficient data storage and management.
- Database modeling, SQL query optimization and transaction implementation to ensure consistency and performance.

Security and Cryptography:

- Implementation of SSL/TLS using certificates such as Let's Encrypt to ensure secure communications over HTTPS. Configuring advanced security policies to protect sensitive data and prevent cyber attacks.

Performance Optimization:

- Advanced configuration adjustments to optimize caching and compression of static resources on the web server.
- Implementation of performance techniques such as lazy loading, prefetching and pageload optimization to improve page loading speed.

DDoS Protection and Advanced Security:

- Configuring Cloudflare to protect against DDoS attacks and mitigate malicious traffic before it reaches the web server.
- Implementation of Reverse Proxy with Cloudflare to improve performance, security and availability of applications.

Firewall and Advanced Security:

- Configuring advanced firewall rules on Cloudflare and on the server to protect applications and data from cyber threats.

Traffic Monitoring and Analysis:

- Using Cloudflare analytics tools to monitor traffic, identify access patterns and detect possible vulnerabilities.

Hosting and DNS Configuration Management:

- Configuration and management of hosting services to ensure the availability and scalability of web applications.
- Configuring and optimizing DNS records to correctly direct traffic between servers and web services.

IT consultancy:

- Provision of consultancy for companies, focusing on efficient and secure IT infrastructure and software development solutions.
- Implementation of best development, DevOps and CI/CD practices to maximize operational efficiency and ensure software quality.

Career Objective

I aim to obtain a degree in Computer Science and am committed to improving my skills as a Full-Stack Developer. I am open to collaborations and challenges that promote my professional growth and add significant value to organizations.
